

ISOPHTHALIC ACID POLYAMIDE POLYMER FOR USE IN GOLF BALL COVERS OR MANTLES

Abstract of the Disclosure

5 Disclosed herein is a golf ball with a cover or mantle, or both, formed
from an isophthalic acid polyamide composition and a method of making
the same. In one embodiment, the golf ball has a cover which contains a
combination of an isophthalic acid polyamide component and an ionomeric
component or a non-ionomeric terpolymer component. The cover
10 composition has excellent durability and resistance to cracking, even at
cold temperatures. The nylon-ionomer blend is a useful substitute for an
ionomer golf ball cover, particularly when a low spin golf ball is desired.
